

Optimize Cobot Productivity with REMOTE CHECK

Are you getting the most from your cobot work cell? Can you get more production output and increase uptime? Get the profitable answers with Remote Check. Part of Universal Robots' Service360 customer service program, Remote Check optimizes productivity by evaluating your cobot's complete operational profile – motion sequences, speeds, loads, and programming. The result: sustainable improvements in work cell output and maximized value from your cobot investment.

Special reduced pricing for Remote Check is available for a limited time.

- Improve Performance / Productivity / Throughput
- Extend Cobot Life / Reduce Maintenance And Repairs
- Improve ROI / Maximize Investment Value

Remote Check: How It Works

- On receiving your cobot log files, your UR team will review them to identify any issues that limit performance and productivity. If a video of your application is provided, we will review it to identify improvements in work cell efficiency and output.
- You'll receive an analysis of your cobot programming that will optimize performance to reduce cycle time, wear and tear.
- You'll receive a written report documenting all findings, usually within 3 business days of your submission.
- You can also request a virtual meeting with your UR service team to review and explain all findings, recommendations, improvements and benefits.

Call us to learn more about Remote Check today.
And get the maximum performance, productivity, service life, and ROI from your cobot.
